As a seasoned leader in digital solutions, my passion for AI and its transformative potential drives everything I do. With two decades in the digital space, I've honed expertise in Developer Management, Solution Architecture, and Product Management.

My journey began in development, and over the years, I've grown into a strategic leader, bridging the gap between technology and creativity to deliver innovative, high-quality digital products.

With the capabilities of AI for productivity expanding, my goal is to lead teams in redefining digital development through AI-driven workflows, automating processes, and creating scalable solutions that enhance productivity, user experience, and business outcomes.

EXPERIENCE

Head of Engineering, Battlefy Jan 2024 – Present

- Lead all engineering functions following the CTO's departure, acting as the primary technical and strategic leader for the company's technology roadmap.
- Drive cross-functional collaboration with Product, Design, and Business teams to align engineering initiatives with company growth and customer needs.
- -40% Reduced infrastructure costs by 40% through targeted optimizations in scaling, caching, and resource allocation.
- +50% Spearheaded AI-assisted development workflows, improving engineering productivity by 50% and reducing operational bottlenecks.
- Designed and led the incremental migration of a legacy Angular application, introducing a React-based, accessible-first
